

## TECHNICAL BULLETIN T02-2024

### Tron SA20 PLB, Printer Guidance:

Below is a recommended printer guidance, where Tron SA20 PLB requires printing of labels that will be attached to the product after programming.

These are the following label tape size requirements (width x height):

- 9mm x 42 mm and 9mm x 65 mm on White Background / Black Text
- 18mm x 44 mm on Transparent Tape / Black Text

These labels will be provided by the programming application in both the Brother LBX format and a PDF format. The LBX format has been tested with the following applications:

#### Desktop applications:

- Brother P-touch Editor 6.0
- Brother P-touch Editor 5.4

#### Mobile apps:

- Brother iPrint&Label

To print these labels, we recommend a printer that can support the above label sizes and has a resolution of at least 300 vertical DPI. We highly recommend that the label printer is configured to print in the highest quality setting.

The printers can be connected via Bluetooth, USB or network depending on printer type and user device.

Some recommendations from Jotron includes:

- Brother PTP710BT Cube Plus
- Brother PTP710BTH Cube Plus
- Brother PTD800W
- Brother PTP900Wc
- Brother PTP910BT Cube Pro
- Brother PTP950NW

For these printers we recommend the following label tapes:

- 8m x 9mm White Background / Black Text - Type TZe-221
- 8m x 18mm Transparent Tape / Black Text - Type TZe-141

Other printer and label combinations may work as well. Brother printers supported by the listed applications and printing from the LBX format are most likely to give the best results.
